1. PLACE CONNECTORS

DeckWise® Deck Tile Connectors (sold separately) will also fasten eased edge trim pieces when installing hardwood deck tiles. Use deck tile connectors around the perimeter of your deck tile layout to receive the side and corner trim pieces.

2. PRE-DRILLED EDGE TRIM

Each deck tile trim piece comes pre-drilled to snap onto a deck tile connector pine tree fastener pin. An additional 3/16" thick spacer in the middle of each trim piece comes pre-installed for added support and proper water drainage.

3. STRAIGHT EDGE TRIM

Use one straight deck tile trim piece per exposed deck tile edge. Align the pre-drilled hole on the underside of the trim piece with the pine tree fastener pin of the deck tile connector and press firmly to secure. The integrated spacers of the tile connector will ensure precise gaps.

4. CUTTING CORNERS

Corner trim pieces are pre-cut at a 45° angle. One deck tile connector will attach 2 corner trim pieces at the outside 45° corner. Use a utility knife to remove 1/4 of the connector along the bottom score lines. Make sure you score to remove the 2 gap spacers as well.

Always cut in the direction away from your body and hands.

5

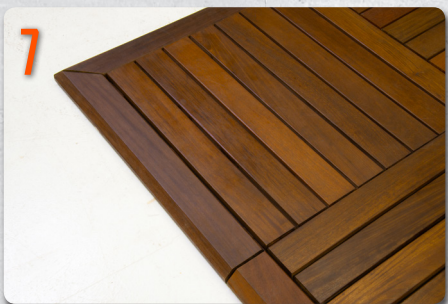

5. FIT CORNER CONNECTOR

Fit the cut deck tile connector on the corner of the deck tile as shown to the left. Two pine tree fastener pins should be visible to accept the 45° corner trim pieces. The remaining gap spacers will provide consistent spacing.

6

6. INSTALL CORNER PIECES

Corner trim pieces are sold in pairs for both left and right hand corners. Installation holes are pre-drilled in each 45° corner to secure the trim to the deck tile connector. Align with the gap spacers on the deck tile connector and press firmly onto the pine tree fastener pin. Repeat for the adjacent side.

7

7. EASED EDGE DECK TILES

The finished hardwood deck tiles will now have an eased edge that is perfect for a gradual declines and smooth transitions.
