

PROTECT YOUR INVESTMENT

Designed to protect deck boards, siding/cladding, railings, steps, log ends, turning blanks, and other exposed end grain.

PROTECT END GRAIN WITH WISESEAL®

WISESEAL® has been specially developed for all species and styles of wood to extend the lifespan of boards. By sealing end grain of any board, WiseSeal® guards against water intrusion. Apply to hardwoods, thermally modified wood, treated wood and composite material made with natural wood fibers. The sooner WiseSeal® is applied to decking butt joints and ends, the more effective it will be in preventing end checking, splitting and swelling. Similar in viscosity to a wood stain, WiseSeal® easily brushes on and dries clear.

APPLICATION

Always clean dirty wood end grain before applying WiseSeal®. Apply an even coating to the end grain of the wood. Brush from the bottom upwards on deck boards and apply liberally on log ends. Thorough, complete coverage of the end grain will maximize the benefits for your lumber.

DO NOT APPLY TO BOARD SURFACES!
